Sealing Materials

密封材料

In sealing technology, mainly two groups of macromolecular (polymer) substances are used: elastomers and thermoplastics. Macromolecular substances are organic compounds, its molecules consist of several thousands, often even millions of atoms, known as macro, giant, string or chain molecules. They can be created either by modification of highly molecular natural materials (e.g. natural rubber) or by depositing low-molecular elements (so called monomers) through various chemical reactions (synthetic materials, plastics).

在密封领域，主要使用两组大分子（聚合物）材料：弹性体和热塑性塑料。大分子物质是一种有机化合物，其分子由数千个，甚至数百万个原子组成，称为大分子、巨分子、弦分子或链分子。它们可以通过改性高分子天然材料（如天然橡胶）或通过各种化学反应（合成材料、塑料）沉积低分子元素（所谓单体）来产生。

Elastomers

弹性材料

Elastomers are materials that can be highly expanded by exerting relatively little power. Because of their structure, elastomers have a high retractibility, which means the compression set is very limited. There are two main groups of elastomers; rubber materials and thermoplastic elastomers. The rubber materials are polymers, which are formed by chemically cross-linked macromolecules with various vulcanization additives. Due to their chemical bonds they do not melt but rather begin to decompose at high temperatures. The cross-links also results in that the rubber materials don't dissolve or, depending on the medium, swell or shrink.

弹性材料是一种可以通过施加相对较小的力而高度膨胀的材料。由于其结构，弹性体具有较高的伸缩性，这意味着压缩永久变形非常有限。有两大类弹性体：橡胶材料和热塑性弹性体。橡胶材料是聚合物，由化学交联大分子和各种硫化添加剂组成。由于它们的化学键，它们不会熔化，而是在高温下开始分解。交联还导致橡胶材料不溶解，或根据介质的不同而膨胀或收缩。

Polyurethanes

聚氨酯

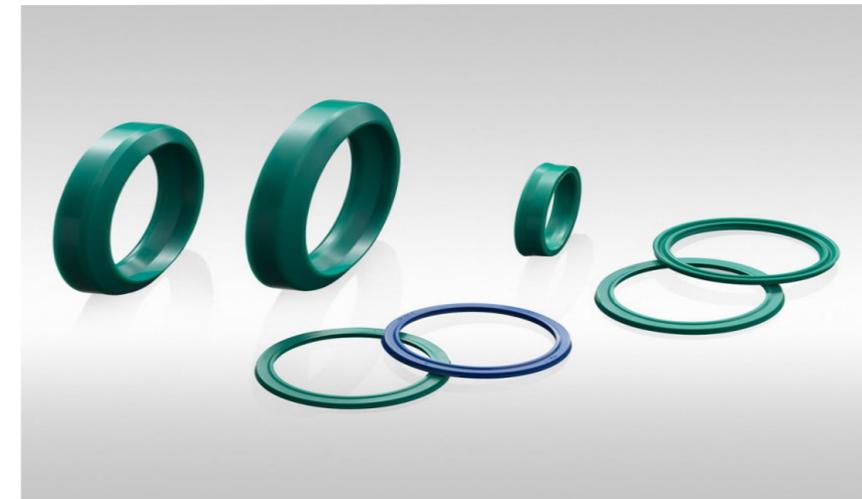

Polyurethanes play an important role in today's sealing technology. They have gained an important market share in the global seal market and are mainly used as piston and rod seals (U-cups), wipers and primary sealing element in composite seals.

聚氨酯在当今的密封技术中扮演着重要的角色。它们在全球密封市场上占有重要的市场份额，主要用作活塞和活塞杆密封（Y形圈）、防尘圈和组合密封的主密封元件。

PULIM Sealing Technology is able to offer our customers a wide range of polyurethane compounds. Our manufacturing technology guarantees the development of excellent physical properties during polymerization, which results in outstanding material quality.

普力密封技术能够为我们的客户提供广泛的聚氨酯化合物。我们的制造技术保证在聚合过程中开发出优异的物理性能，从而获得优异的材料质量。

 PLMPUR (TPU) green 绿

PLMPUR is a thermoplastic polyurethane elastomer, with an excellent abrasion resistance, low compression set, outstanding tensile properties and tear strength. PLMPUR is mostly used for U-cup seals, lip seals, wipers and chevron packings, but it may also be used for dampers and other machined parts. It has a very good resistance against hydraulic fluids based on mineral oils, however in applications with water-based fluids (e.g. HFA, HFB) and native liquids (vegetable oils) a temperature of 60°C should not be exceeded.

PLMPUR is produced by injection moulding and shows a very good machinability.

PLMPUR 是一种热塑性聚氨酯弹性材料，具有优异的耐磨性、低压缩永久变形、优异的拉伸性能和撕裂强度。PLMPUR 主要用于 U 形密封件、唇形密封件、防尘圈和 V 形密封件，但也可用于减振器和其他机加工零件。它对基于矿物油的液压油具有很好的抵抗力，但是在水基液体（例如 HFA、HFB）和天然液体（植物油）的应用中，温度不应超过 60°C。

PLMPUR 是通过注射成型生产的，具有很好的可加工性。

 PLMPUR-H (TPU) red 红

PLMPUR-H is a hydrolysis-resistant thermoplastic polyurethane elastomer. It combines the engineering properties of PLMPUR (outstanding physical properties) with a high chemical resistance against a broad range of fluids. It is resistant against hydrolysis (degradation in water) which is otherwise rare when it comes to polyurethane's. E.g. it is stable in water up to +90 °C and has an outstanding stability in mineral oil as well. Because of its resistance to hydrolysis PLMPUR-H can be used for water hydraulic and for applications in mining, tunnelling and manufacturing of presses. PLMPUR-H is particularly recommended for the use in pure and seawater, for HFA and HFB fluids and biologically degradable hydraulic fluids (vegetable oils and synthetic esters) and food articles. PLMPUR-H is in conformance with various food regulations and can be used for many food-, beverage- and healthcare applications.

PLMPUR-H is produced by injection moulding and shows also a very good machinability

PLMPUR-H 是一种耐水解的热塑性聚氨酯弹性材料。它结合了 PLMPUR 的工程特性（卓越的物理特性）和对各种流体的高耐化学性。它能抵抗水解（在水中降解），这在聚氨酯中是罕见的。例如，它在高达 +90 °C 的水中稳定，在矿物油中也具有出色的稳定性。由于其抗水解性，PLMPUR-H 可用于水液压以及采矿、隧道掘进和压力机制造中的应用。PLMPUR-H 特别推荐用于纯净水和海水、HFA 和 HFB 流体以及生物降解液压流体（植物油和合成酯）和食品。PLMPUR-H 符合各种食品法规，可用于许多食品、饮料和医疗保健应用。

PLMPUR-H 是通过注射成型生产的，并且显示出非常好的可加工性

www.pulim.cn

 **PLMPUR-SL (TPU) grey 灰**

PLMPUR-SL (TPU) has been optimised in regard of the tribological characteristics (friction and wear), achieved by an addition of a synergetic combination of solid lubricants. Compared to PLMPUR-H, PLMPUR-SL has superior sliding properties. This special material is therefore best suited for most severe applications in the water hydraulics as well as in the non-lubricated pneumatics.

PLMPUR-SL (TPU) 在摩擦学特性（摩擦和磨损）方面进行了优化，通过添加固体润滑剂的协同组合实现。与 PLMPUR-H 相比，PLMPUR-SL 具有优越的滑动性能。因此，这种特殊材料最适合于水液压以及非润滑气动系统中最恶劣的应用。

 **PLMPUR-LT (TPU) blue 蓝色**

PLMPUR-LT is a thermoplastic polyurethane elastomer, that has been developed for low temperature applications. The physical and chemical properties of PLMPUR-LT are similar to those of PLMPUR, but the minimum service temperature is extended to -50 °C. For that reason PLMPUR-LT should be used under severe climatic conditions and for applications in freezing plants.

PLMPUR-LT 是一种热塑性聚氨酯弹性材料，专为低温应用而开发。PLMPUR-LT 的物理和化学性质与 PLMPUR 相似，但最低使用温度延长至 -50° C。因此，PLMPUR-LT 应在恶劣气候条件下使用，并应用于冷冻厂。

www.pulim.cn

 **PLMPUR-X (TPU) dark green 深绿**

PLMPUR-X is a thermoplastic polyurethane elastomere and has a significantly higher hardness compared to the standard PLMPUR grade. The composition of the material provides outstanding friction and wear properties as well as high pressure resistance. Therefore the material is well suited for the use as a composite seal, for wipers working in heavy-duty applications as well as for engineered plastic parts that need high elasticity and superior resilience behaviour. Due to the exceptional extrusion resistance seals made of this material are working at higher pressure levels and larger clearances than those made of standard polyurethanes and PTFE compounds.

PLMPUR-X 是一种热塑性聚氨酯弹性材料，与标准 PLMPUR 等级相比具有更高的硬度。该材料的组成提供了优异的摩擦磨损性能以及耐高压性。因此，该材料非常适合用作组合密封件，用于重型应用中的防尘圈，以及需要高弹性和优异回弹性能的工程塑料零件。由于该材料具有优异的抗挤压性能，因此与标准聚氨酯和 PTFE 化合物制成的密封相比，该材料制成的密封件在更高的压力水平和更大的间隙下工作。

 **PLMPUR-XH (TPU) dark red 深红**

Compared to the standard grade PLMPUR-H, PLMPUR-XH has a significantly higher hardness. The composition of the material based on special raw material provides outstanding friction and wear characteristics as well as pressure resistance .

与标准级 PLMPUR-H 相比，PLMPUR-XH 具有显著更高的硬度。基于特殊原材料的材料成分提供了卓越的摩擦和磨损特性以及耐压性。

www.pulim.cn

PLMPUR-XSL (TPU) dark grey 深灰

Compared to the PLMPUR-SL standard material, PLMPUR-XSL has a higher hardness and therefore further improved sliding properties. PLMPUR-XSL has a better extrusion resistance than the standard material and therefore sealing elements of this material can be used at higher pressures.

与 PLMPUR-SL 标准材料相比, PLMPUR-XSL 具有更高的硬度, 因此进一步改善了滑动性能。PLMPUR-XSL 具有比标准材料更好的抗挤压性, 因此这种材料的密封元件可以在更高的压力下使用。

PLMPUR-G (CPU) red 红色

PLMPUR-G is a cast hydrolysis-resistant polyurethane elastomer with similar properties to PLMPUR-H especially regarding its chemical stability. Therefore PLMPUR-G can be used in the same hydraulic fluids as PLMPUR-H.

PLMPUR-G 是一种浇铸型的抗水解聚氨酯弹性体, 具有与 PLMPUR-H 相似的性能, 尤其是其化学稳定性。因此, PLMPUR-G 可用于与 PLMPUR-H 相同的液压油中。
